Silo Telemetry

"Monitoring for your Silos or Storage Tanks that is cost effective, easy to use, and available on any mobile device or computer anywhere."

Silo Telemetry is the ability to remotely realise the content of a silo or vessel using the internet and mobile networks.

Using telemetry allows for a customer or a supplier to be more accountable for raw materials which are used in a process.

Why you should be considering a telemetry monitoring solution

The use of telemetry for remote silo and tank level monitoring reduces distribution costs and improves customer service. By automatically measuring the amount of product within a silo or storage tank, you can:

✓ Increase delivery volumes and reduce part load returns

✓ Improve customer service and confidence

✓ Initiate proactive delivery scheduling

✓ Eliminate run outs and emergency deliveries

✓ Minimize order processing errors

✓ Reduce man power and unattended deliveries

✓ Improve production planning via trending

Applications

Food Industry - Any ingredient which is supplied in bulk be it Granular, Powder, Solid, Liquid

Agricultural - Stock feed silos, Water tank Level, Grain silos

Transport - Cold storage transportation, GPS real time Tracking

Food manufacturers - Tank and Silo level monitoring and automatic meter readings

Vendor Managed Inventory from any location 24/7

Silo telemetry's Vendor Managed Inventory software puts you in control of business processes from any location, creating an around the clock partnership between suppliers and customers.

Sensors send information to Cloud Data Storage

Data retrieved from Cloud for Client and Supplier's use
